

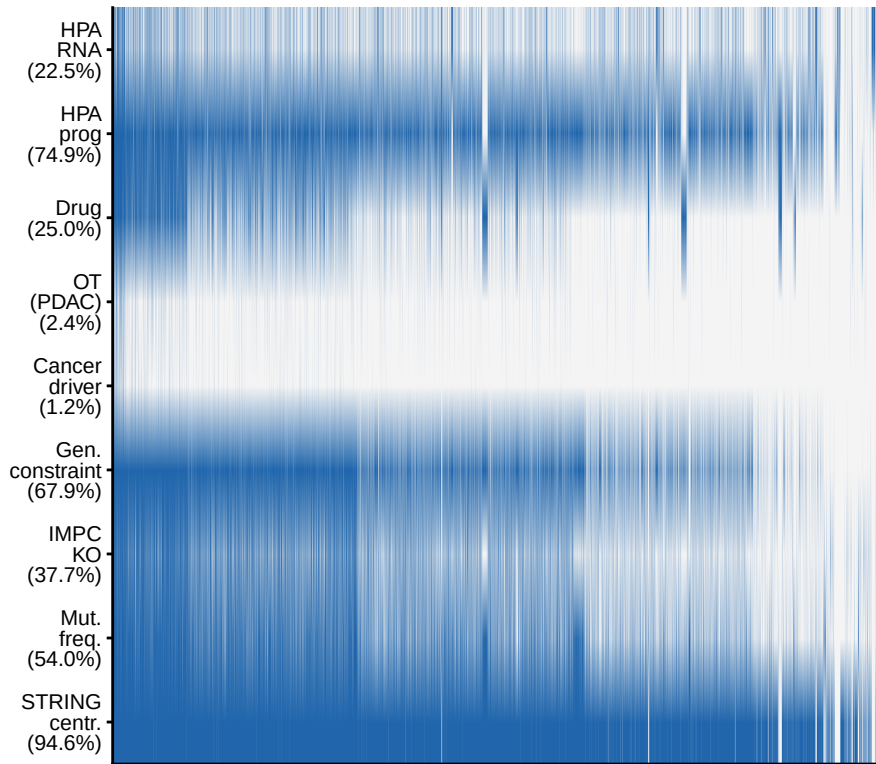

Fig. 3 Evidence availability and representation affect the measured increment

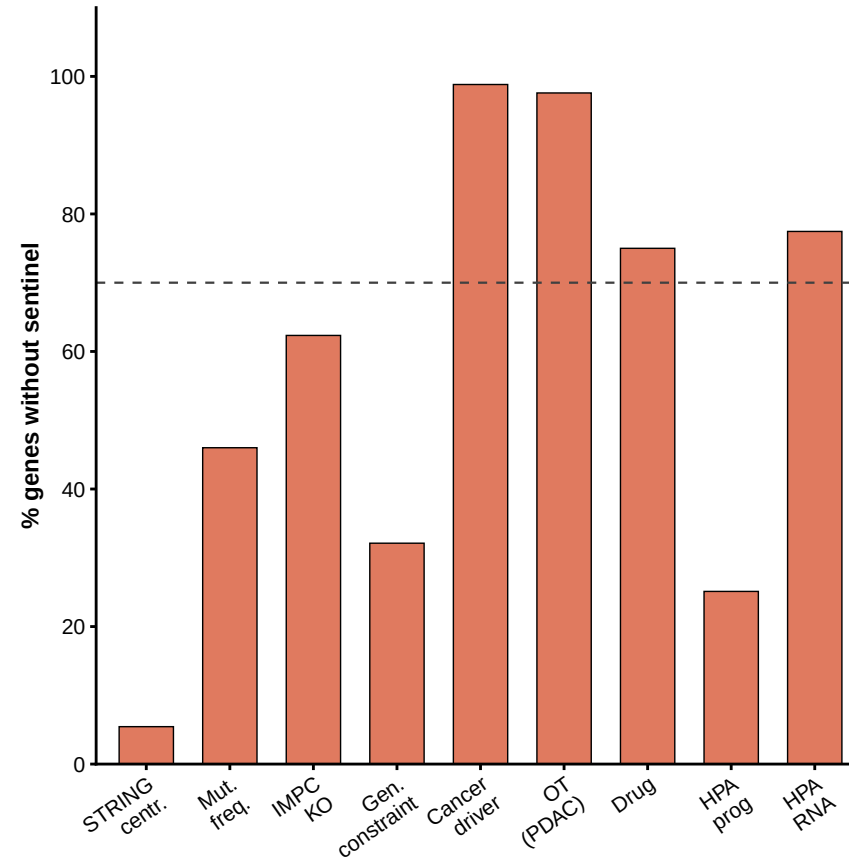

**a Candidate-by-layer evidence availability
(1 = annotated, 0 = missing)**

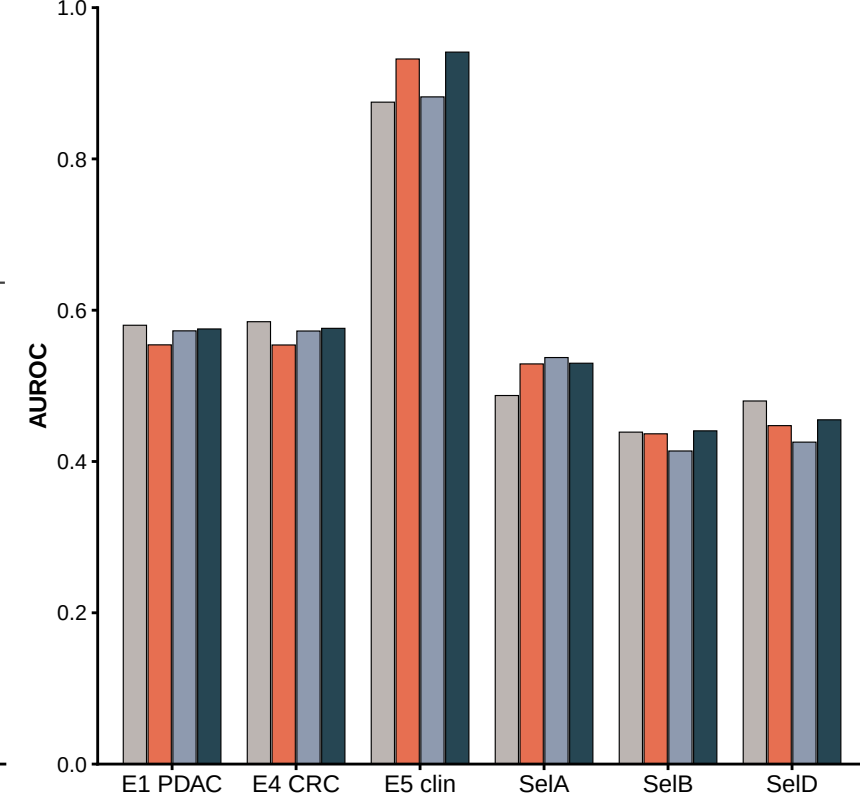

candidates (N = 20751, sorted by total coverage, high to low)

0 missing 1 annotated

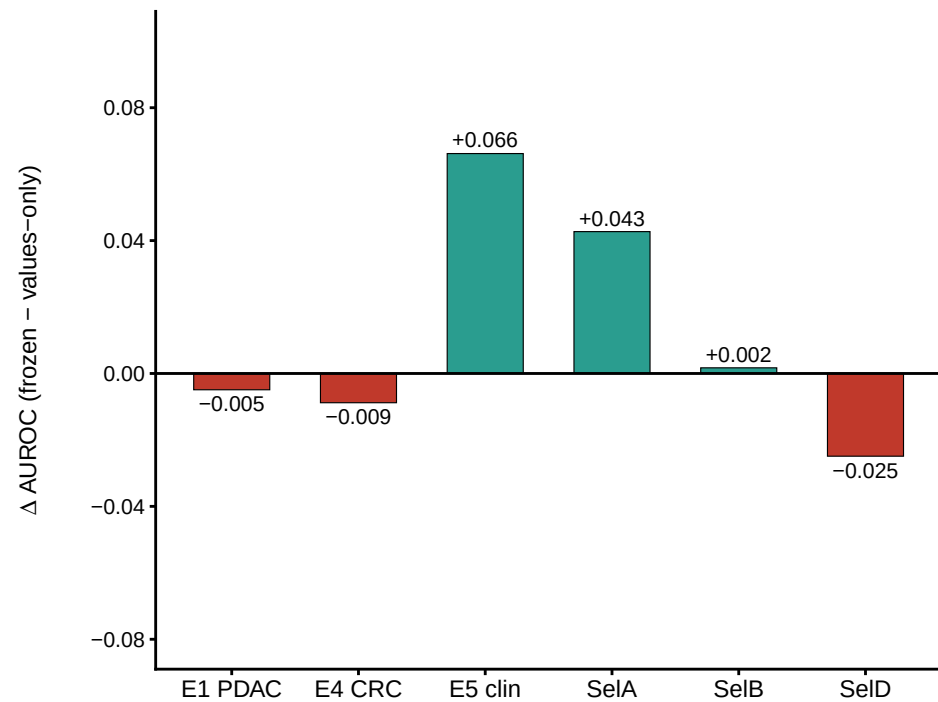

**b Missingness patterns across layers
(higher = less available)**

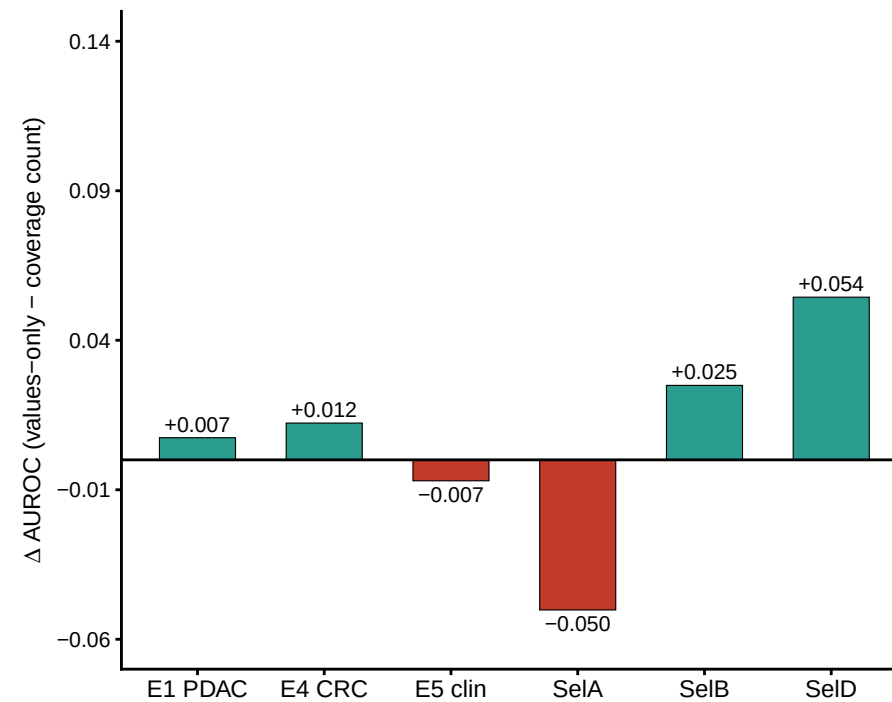

**c Alternative missingness conditions
(frozen harmonic family)**

**d Delta under matched condition 1:
missingness-aware vs values-only**

**e Delta under matched condition 2:
actual values vs coverage only**

f Representation audit: provenance vs model-input
